WHAT IS CLAIMED IS:

1   1. An information-providing server comprising:

2   a communication element which receives page setup

3   information, which includes addresses of web pages which a user

4   intends to integrate into a single page and information which

5   indicate a layout of said single page, from a terminal via a

6   network, and transmits said web page to said terminal via said

7   network.

8   a registration element, which registers said page setup

9   information; and

10   a page generation element, which generates said single

11   page based on said page setup information.

1   2. An information-providing server according to claim

2   1, wherein said communication element receives the number of

3   said web page from said terminal, transmits layout images to

4   said terminal based on the number, and receives information

5   indicating the layout image selected by said terminal as a layout

6   of said single page.

1   3. An information-providing system comprising:

2   a network;

3   a terminal which is connected to said network and transmits

4   page setup information, which includes addresses of web pages

5   which a user intends to integrate into a single page and

6   information which indicate a layout of said single page, to said

7   network; and

8   a server which includes a registration element which

9   registers said page setup information, a page generation

10   element which generates said single page based on said page setup

11   information, and a communication element which receives said

12   page setup information from said network and transmits said

13   single page to said terminal via said network.

1   4. An information-providing system according to claim

2   3, wherein said communication element receives the number of

3   said web page from said terminal, transmits layout images to

4   said terminal based on the number, and receives information

5   indicating the layout image selected by said terminal as a layout

6   of said single page.

1   5. An information-providing method comprising the steps

2   of:

3   transmitting page setup information, which includes

4   addresses of web pages which a user intends to integrate into

5   a single page and information which indicate a layout of said

6   single page to a server from a terminal via a network;

7   generating said single page based on said page setup

8   information by said server; and

9   sending said single page from said server to said terminal

10   via said network.

1   6. An information-providing method according to claim

2 5, comprising further steps of:

3   transmitting the number of said web page to said server

4 from said terminal;

5   transmitting layout images to said terminal based on the

6 number to said terminal from said sever; and

7   transmitting information indicating the layout image

8 selected by said terminal as a layout of said single page to

9 said server from said terminal.
